In a new Chrome browser window, enter "chrome://flags" in the URL bar. Then, in the search bar at the top, type “samesite.”

Check all settings related to SameSite and ensure they are set to "Default." If that's the case, no changes need to be made.

If any settings display "Enabled" or "Disabled," change them to "Default."

If you made changes, click the “Relaunch” button in the lower right of your window to apply the new settings. Please note that once you relaunch, you may lose access to some applications in open browser windows and need to re-login.

JANUARY 2021
Below you will find instructions on how to check the SameSite Cookie settings of your Chrome browser. If you changed the settings of your Chrome browser due to the now rectified U Market / EFS cart issue, please follow the instructions below to set them back to default.
